SUMMARY

Third-year ICT student and full-stack developer focused on AI agent orchestration. I build multi-agent systems, LLM tool-calling, and secure MCP integrations across TypeScript, Python, Node, and AWS, and I work in both English and Japanese (JLPT N2).

EDUCATION

Tokai University

Bachelor of Science in Information and Communication Technology

Tokyo, Japan

Apr 2024 – Mar 2028 (Expected)

- 3rd Year student, School of Information Science and Technology
- Relevant Coursework: Data Structures & Algorithms, Computer Networks, Database Systems, Operating Systems, Software Engineering, Web Programming, Discrete Mathematics

EXPERIENCE

Translation Specialist

Altius Link (formerly KDDI Evolva)

Tokyo, Japan

Jun 2023 – Present

- Translate customer communications for users of KDDI services, supporting bilingual customer service.
- Apply precise wording, cultural nuance, and professional communication under real customer-facing conditions.

Front Desk Associate

Hotel SUI Akasaka

Tokyo, Japan

Apr 2023 – Jul 2023

- Handled guest inquiries, reservations, check-in support, and front-desk service in English and Japanese environments.

Immigration Specialist at Haneda Airport

Japan Airlines

Tokyo, Japan

Feb 2023 – Apr 2023

- Assisted document registration, web-verification workflows, and passenger guidance using English and Japanese.

PROJECTS

WebDrop | *JavaScript, WebRTC, OPFS, Web Audio, Device Motion, Service Worker*

2026

- Building an AirDrop-style file sharing web app that runs entirely in the browser, with no native install and no manual device selection, using only built-in web platform APIs.
- Pairs nearby phones with a physical “bump” detected through the device motion sensor and an ultrasonic Web Audio handshake, then streams files peer-to-peer over WebRTC data channels with OPFS chunked storage.

Agent Swarm | *Swift, SwiftUI, Python, Docker, AWS EC2, OpenAI Codex CLI, MCP*

2026

- Built a leader and agent orchestration runtime where a leader delegates work to parallel Codex agents in isolated Git worktrees, scaling up to 8 agents with a capacity planner that watches available CPU and RAM.
- Coordinated agents through a structured JSON task ledger with health monitoring and MCP-connected context sources, controlled from a macOS app with an iOS companion.

Tutor-System | *TypeScript, React 19, OpenRouter, Deepgram, Dexie/IndexedDB, Express*

2026

- Built an AI learning app with function-calling tutor tools, a realtime voice tutor that splits foreground and background models, and source-aware chat grounded in the user’s own PDFs.
- Engineered an auditable learner-memory layer with embeddings, semantic retrieval, and mastery tracking on an Express backend of around 6,000 lines.

TokaiHub | *TypeScript, React, Tailwind CSS, AWS Amplify, Cognito, Vite, PWA*

2025

- Developed a central student portal PWA for Tokai University with a mobile-first UI and bilingual support.
- Integrated custom AWS Cognito authentication and SES-backed OTP verification flows.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, Swift, HTML/CSS, SQL, Java, C, Bash/Shell

Frameworks & Libraries: React, Node.js, Express, Flask, Tailwind CSS, SwiftUI, PWA, NumPy, Pandas

Tools & Databases: Git, GitHub, AWS (Amplify/Cognito/SES), Docker, SQLite, MySQL, VS Code, Vim

AI & Agents: Agent Orchestration, LLM Tool-Calling, MCP (Model Context Protocol), RAG / Semantic Retrieval, Codex & OpenRouter

Concepts: RESTful APIs, OOP, Design Patterns, Data Structures, WebRTC, Network Protocols, Agile

Languages: English (Professional), Japanese (Business level, JLPT N2), Tamil (Native)
